[GClear interface](#)

As for the [GReadWrite](#) interface, **GENIUS** proposes a [GClear](#) interface in order to **reinitialize** data:

- The data are then reinitialized to the default value given when the widget has been instantiated
- There is the possibility to change this default value by using the [setDefaultValue\(\)](#) method

```
public class GManoeuvre extends GContainer implements GDisplay, GReadWrite,
GClear {
```

```
...
```

```
    public void clear() throws GException { generic(); }
```

```
...
```

At last, you will just have to call the [mainClear\(\)](#) method of the high level object you want to clear (it will correctly call the put methods of the lower level objects, as for [display\(\)](#)) ...

```
public void after(GEvent e) throws GException {
    if ( e.contains(butClear) ){ obj.mainClear(); }
}
```
