[GTabbedPane](#)

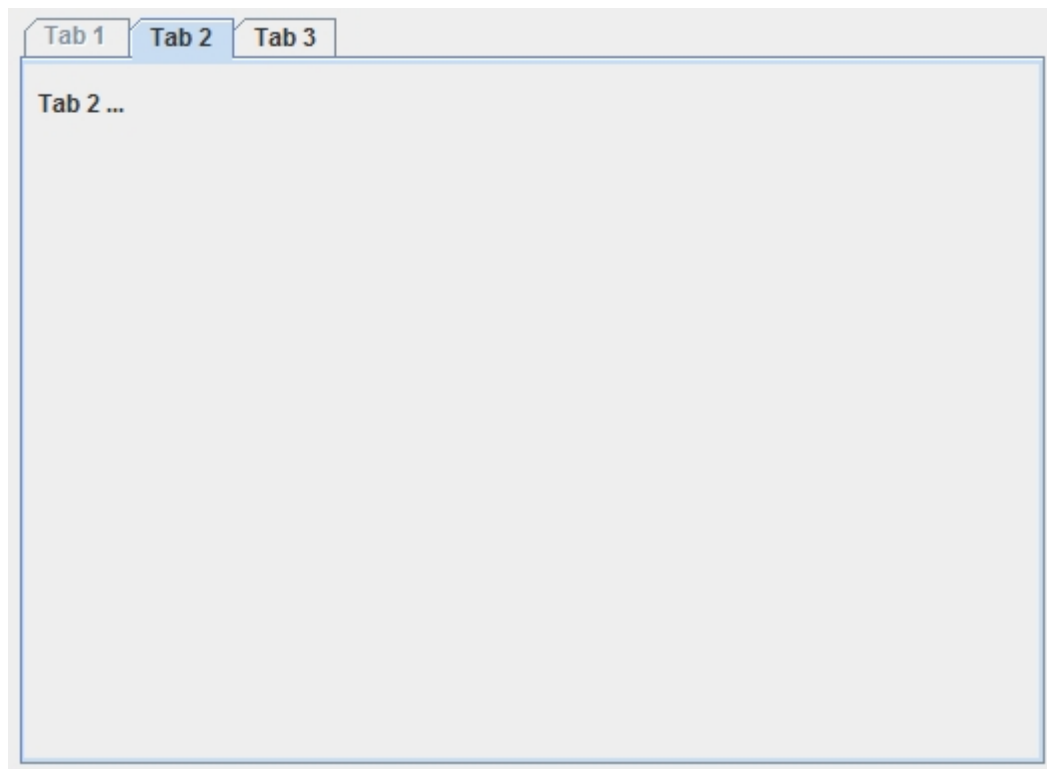

**GENIUS** allows of course to display data inside tabbed panes via the [GTabbedPane](#) class:

```
GTabbedPane tabs = new GTabbedPane();

GLabel lab1 = new GLabel("Tab 1 ..."); // Label to be set in the first pane
(rank #0)
GLabel lab2 = new GLabel("Tab 2 ..."); // Label to be set in the second pane
(rank #1)
GLabel lab3 = new GLabel("Tab 3 ..."); // Label to be set in the third pane
(rank #2)

tabs.addTab("Tab 1", new GPanel() {
    public void display() throws GException { generic(); }
    public void generic() throws GException { put(lab1); }
});
tabs.addTab("Tab 2", new GPanel() {
    public void display() throws GException { generic(); }
    public void generic() throws GException { put(lab2); }
});
tabs.addTab("Tab 3", new GPanel() {
    public void display() throws GException { generic(); }
    public void generic() throws GException { put(lab2); }
});

tabs.getJTabbedPane().setSelectedIndex(1); // The pane to be displayed first
will be the #1 one.
tabs.getJTabbedPane().setEnabledAt(0, false); // The pane #0 will not be
modifiable
...
public void display() throws GException { put(tabs); }
```
