[Main Widgets](#)

We find basic classes needed to build a scientific tool GUI ... in particular entering **real data with units** !!!

Here are some of such available widgets:

- [GButton](#), [GHyperlinkLabel](#)
- [GLabel](#), [GImage](#), [GSeparator](#)
- [GRadioButton](#), [GCheckBox](#), [GChoice](#), [GMultipleChoice](#)
- [GComboBox](#), [GComboBoxWithLabel](#)
- [GPopupList](#), [GPopupListWithLabel](#)
- [GEntryInt](#), [GEntryReal](#), [GEntryString](#), [GEntryDate](#)
- [GSliderWithLabel](#), [GSliderRealWithLabel](#)
- [GTextArea](#) (text over several lines), [GConsole](#)
- [GEntryIntVector](#), [GEntryRealVector](#), [GEntryDateVector](#)
- [GTable1D](#), [GTable2D](#), [GComponentList](#)
- [GMenuBar](#), [GMenu](#), [GMenuItem](#)

We do not explain how to use each item of this widget list. To do that, refer to the [GENIUS javadoc](#). Moreover, we saw at the previous page how to manage a simple button. So, the principle is very simple :

1. First, to declare the object, if possible as a global variable of the current class
2. Then, to instantiate it, if possible inside the constructor of the current class
3. Eventually to customize it (see later how to do do it)
4. At last, use it, at list for display by "putting" it in the [display\(\)](#) or [generic\(\)](#) method

We can see below a very short example based on a [GEntryReal](#)

```
public class MyPanel extends GPanel {  
  
    private GEntryReal myReal;  
  
    public MyPanel () {  
        myReal= new GEntryReal("This is a real:", 123.); // First value displayed  
        will be 123.0  
        myReal.setCurrentFormat(GRealField.Format.SCIENTIFIC);  
    }  
  
    public void display() {  
        generic();  
    }  
  
    public void generic() throws GException {  
        put(myReal);  
    }  
}
```

}

};

GENIUS

- [Welcome](#)
- [Quick Start](#)
- [News](#)

Basic principles

- [GFrame and GPanel](#)
- [Main widgets](#)
- [Links with Swing](#)
- [GLayout](#)
- [Conditional Display](#)
- [GListener interface](#)

More deeper in the concept

- [Units management](#)
- [GContainer](#)
- [GReadWrite interface and data files management](#)
- [Modified data](#)
- [Process management](#)

Still more ...

- [Validity controls](#)
- [Menu bar](#)
- [Icons](#)
- [GClear interface](#)

Still more again ...

- [Tooltips](#)
- [Shortcuts](#)
- [Copy & paste](#)
- [Plots](#)
- [Results File Management](#)
- [GPlotPanel](#)
- [GGroundPlotPanel](#)
- [Internationalization](#)
- [Log file](#)
- [Update data](#)

Some other widgets
