[What is Genius](#)

As indicated by its name, (**GEN**eration of **I**nterface for **U**ser's of **S**cientific **S/W**), **GENIUS** is a **CNES** higher level layer based on **swing**, fully written in **Java** (no need of code generation) but allowing to create more easily **GUI** for **scientific** tools.

**GENIUS** is provided as **Open Source** under license **Apache 2.0**. **JavaDoc** is accessible via this site.

As it is coded in **Java**, this product is available for any kind of platforms owning Java.

## WHY GENIUS ?

In **Java** world, basic tools, as **swing**, may become relatively complex to use because it stays at a certain low level (on the opposite, it allows to do a lot of things). Moreover, **GUI** for flight dynamics tools (or, more generally, scientific tools) need most of the time :

- To enter input (numerical) data from the screen or the keyboard
- To read / write these data into files
- To execute computation thanks to these data,
- To visualize results

## MAIN ADVANTAGES

- As it is coded in **Java**, this product is available for any kind of platforms owning Java.
- **GENIUS** is provided as **Open Source** under license **Apache 2.0**. **Java doc** is accessible via this site.
- Simplified approach, in particular about **events management** (**BEFORE**, **AFTER**)
- Performing **conditional display**
- **Read/write** for files directly integrated
- **Units management**
- **Process management** compatible of all OS (thanks to **Java**).
